

## Mirrors

### **When to Use**

Change of speed

Before any manoeuvre

Junction – Roundabout

Parked cars – obstruction

Traffic lights – Pedestrian crossing

Changing lanes – Overtaking

Etc.

Normal driving 8 – 10 seconds

### **Why to Use**

To be fully aware of any other road users at all times

### **How to Use**

In pairs

Because of position – get 2 different views

Because of type of glass – get 2 different angles

### **Type of Glass**

Centre mirror - Flat (true vision)

More accurate idea of distance

Door mirrors – Convex (curved)

Wider angle of vision

### **Vehicles Behind too Close**

Allow more time for manoeuvre

Slow down

Make enough distance to be able to stop in an emergency

### **Anti Dazzle**

Adjust lever under centre mirror
